

# REACH Compliance Statement

Update: April 14th, 2024

## REACH Overview

REACH stands for Registration, Evaluation, Authorisation and restriction of CHemicals and is a European regulation that addresses the production and use of chemical substances. Palram is fully aware of the requirements of REACH. It is our intention to fully comply with the legal requirements.

## Registration

Palram's products are defined as "Articles" with no intended substance release from the polymeric matrix under normal and foreseeable conditions of use. Therefore, to the best of our knowledge, substances contained in our products are exempt from registration obligation (Art. 7.1).

## SVHC (Substances of Very High Concern)

We are proactive in monitoring the SVHC Candidate List (last update 23/01/2024), which is regularly updated following Article 59(1) of REACH. Based on the latest information from our suppliers, our products do not intentionally contain any listed SVHCs in concentrations equal to or greater than 0.1% (weight by weight). The presence of analytically detectable traces, which have possibly been introduced via raw materials, auxiliaries and additives, cannot be excluded. Specific analyses to measure such traces have not been performed.

## Ongoing Commitment

Palram is dedicated to full compliance with REACH, ensuring all our products adhere to current regulations and continuing to manage chemical risks effectively. Our proactive approach includes ongoing reviews and updates in line with REACH developments, ensuring the safety and compliance of our products.

## Validity

This statement is accurate as of the last update and represents our commitment to the safety and regulatory compliance of Palram products under current REACH regulations. We will keep our stakeholders informed and ensure our practices meet all required standards.
